Ryan Leaman

leaman@mpia.de

- Max-Planck Institute für Astronomie, Heidelberg, Germany

- interests:

  - analytic models

  - galaxy accretion histories

  - dwarf galaxy chemical and dynamical evolution

  - tests of dark matter models

- talk: not applicable.   food allergies: shellfish and rhubarb

- I have never run a Schwarzschild model before so can't include a plot, but I am very excited to hopefully learn how to start a model.

- My goal would be to learn how to set one up in a mock potential which resembles a dwarf galaxy that I like (but which doesn't have integrated kinematic data).

- I am looking forward to learning a lot about how the models are run in practice, and also how to use python.
