Kiranti Culture in Contemporary Nepal

There has been a growing academic interest in the diverse traditions of Kiranti-speaking groups in East Nepal since the 1970s, when N.J. Allen published his pioneering studies on the Thulung Rai. Especially linguists have done extensive research and documentations of the highly variable languages belonging to the Kiranti subgroup of Tibeto-Burman. However, ethnographic studies have lagged behind: whereas now sketch grammars exist for more than a dozen Kiranti languages, this is not matched by thorough description of cultural traditions. Therefore the workshop is meant to give a platform for the existing expertise on Kiranti cultures and to discuss the present state of research. A particular focus will be on “Kiranti religion”, which is a label acknowledged in the Nepal Census since 1991 but which is still a little known entity. In the present political context of ethnic politics it will be of particular interest to study the changing configuration of these traditions.
